Asset Manager Pro: v6

Tools for managing
the business of IT

- **IT professionals have always been under pressure to maximize their organization's return on the technology.**
- **Corporate governance legislation has raised personal accountability for license compliance and security of data and IT assets.**
- **IT must innovate without increasing costs.**
- **The need for cost-effective tools to manage IT assets is greater then ever.**

Asset Discovery

Network Mapping

PC Configuration Inventory

Software and File Inventory

Application Package Policy Manager

Application Usage Measurement

Web-based Reporting

Asset Manager Pro Database

- **PCs and network devices automatically discovered**
- **Navigable network mapping with Visio export**
- **Network location change detection**
- **PC configuration inventory and change detection**
- **PC configuration analysis for upgrade and refresh planning**
- **PC software inventory and file discovery**
- **Application software requirements assessment and variance analysis against inventory**
- **Application license compliance analysis**
- **Application usage history and analysis, including on Citrix and MS Terminal Services servers**
- **Software license re-allocation and optimization**
- **Planning and support for application virtualization**
- **Non PC and non-IT assets stored**
- **Drill-down reporting with multi-format export**
- **Integration with Vector and third party help desks**

Vector's Asset Manager Pro employs a suite of integrated functions anchored on the Vector Asset Management database. The database is normally hosted on SQL Server but other ODBC-compatible databases can be used. The solution scales from an out-of-the-box default configuration to handling several thousand PCs and network items. Deployment is highly automated. AM Pro uses a permanently installed agent for application usage monitoring; it also has a one-shot mode for on-demand inventory scanning. The Web-based reporting is based on Crystal report technology and exploits IIS.

Related Solutions

The functionality in Asset Manager Pro is also available in two sub-sets.

• Where the current need is for a foundation capabilty of asset discovery and inventory, Vector's Asset Discovery, Inventory and Mapping solution is an optimum fit. It excludes the application software planning and usage measurement capabilities of AM Pro.

• Where the focus is on the challenges of application license provision and optimization, the Software Compliance and Optimization solution is the best fit. It excludes the hardware discovery and network mapping of AM Pro.
